

Executive Summary

FPN generated **₹35,20,984** in total revenue from **1,000 orders**, at an average order value of **₹3,520.98** and an average delivery time of **5.53 days**. Revenue is heavily seasonal, occasion-concentrated, and skewed toward a small set of top-performing products, cities, and categories — all of which point to clear opportunities for more targeted marketing spend.

Key Insights

1. Occasion mix is broad but top-heavy

Anniversary, Raksha Bandhan, "All Occasions," Holi, and Birthday are your top 5 revenue drivers, while Valentine's Day and Diwali sit at the bottom — somewhat surprising for gifting platforms where these are usually peak seasons. This could mean either genuine lower demand, or a missed opportunity/tracking gap worth investigating.

→ *Marketing action*: Double down on Anniversary/Raksha Bandhan/Birthday campaigns (proven demand), and run a diagnostic on why Diwali/Valentine's underperform — pricing, product range, or awareness gap.

2. Category concentration risk

"Colors" and "Soft Toys/Sweets" dominate category revenue, while Cake, Plants, and Mugs lag far behind despite being core to a gifting brand.

→ *Marketing action*: Bundle underperforming categories (e.g., Cake + top occasion) or cross-sell them alongside your bestsellers rather than marketing them standalone.

3. Revenue is heavily monthly-seasonal

Two sharp spikes — one around February/March and a much bigger one in August — with long flat stretches otherwise.

→ *Marketing action*: Treat Aug and Feb-Mar as peak campaign windows (higher ad spend, inventory readiness), and build promotional pushes (flash sales, bundle offers) to lift the flat months rather than just riding organic seasonality.

4. Clear intraday ordering pattern

Revenue by hour shows a steady climb with peaks around late evening (18:00–22:00) and a dip in early morning hours.

→ *Marketing action*: Schedule paid ads, push notifications, and email sends to land just before these peak windows (e.g., 4–6 PM) to capture intent as it builds.

5. Geographic concentration

Imphal, Dhanbad, and Kavali lead order volume — a somewhat non-metro-heavy list, which is a useful (and possibly underleveraged) insight.

→ *Marketing action*: Increase hyperlocal targeting/regional-language ads in these top cities rather than spreading budget thin across metros where you may be underperforming.

6. Product concentration

Magnum Set and Quia Gift alone significantly outpace the rest of your top 5 products.

→ *Marketing action*: Feature these as "bestseller" anchors in ads/homepage, and use them as the entry point to upsell toward higher-AOV bundles.

Conclusion

This first dashboard already tells a clear story: FNP's revenue isn't evenly spread — it's concentrated in a few occasions (Anniversary, Raksha Bandhan, Birthday), a couple of product categories (Colors, Soft Toys), specific cities (Imphal, Dhanbad, Kavali), and distinct time windows (August, evening hours). That's not a weakness — it's actually useful clarity. It means marketing spend doesn't need to be spread thin; it can be concentrated where demand is proven, while smaller, deliberate experiments are run on the weaker segments (Diwali, Valentine's Day, Cake, Plants, Mugs) to find out whether they're genuine low-demand areas or untapped opportunities.

In short: **double down on what's working, diagnose what isn't, and time campaigns around the seasonal and hourly patterns already visible in the data.** With average delivery time sitting at 5.53 days, there's also room to explore whether faster fulfillment during peak windows (August, festive months) could lift conversion further.
